The team

Because balance starts from the roots.

Idea

Professional skill, passion and more than fifty years' experience are the qualities that guide us in our phytopharmaceutical research so that we can offer consumers top-quality natural products with proven efficacy.

Our careful selection of active ingredients of natural origin enables Ginsana to offer excellent preparations for the general wellbeing of our customers and for the prevention and natural treatment of specific ailments.

Serving
science,
in the name
of nature.

Value

Thanks to our wealth of experience in the pharmaceutical field and in medical and scientific research, we offer effective solutions that are the result of the balanced combination of nature and science.

Our aim is to offer our customers the best of both these worlds. This is what has always inspired us to study medicinal plants and to develop standardised vegetable extracts, and also the reason why, more than fifty years later, we continue to pursue our objective with the same passion and devotion.

Because of this, we subject our medicinal plant extracts to the most stringent quality control checks and to strict scientific procedures. Clinical studies on the products are then carried out to prove their effectiveness and safety, making them a valid alternative to synthetic pharmaceutical products.

Business model

Our business model is based on three cornerstones:

01

Development and sale of our own products

01 We are constantly developing and selling innovative products based on medicinal plants. These products meet the specific needs of our customers: from preparing in the best possible way for a specific event such as pregnancy to protecting oneself and achieving new vitality and balance.

02

Industrial-scale production for third parties

02 High productivity, top quality and a full range of technology: this is what we provide for other companies working in this field, creating value both in terms of finance and customer satisfaction. Our industrial production provides excellent expertise throughout the entire value chain and pharmaceutical process.

03

Provision of scientific, regulatory and analytical services

03 Ginsana offers consulting, complete and customised services in the scientific field ranging from the initial conception of a product, its development and its industrialisation through to the creation of international registration dossiers.

We work alongside some of the most important names in the global pharmaceutical industry (such as Boehringer Ingelheim), both by distributing products in over 100 different countries and through industrial co-operation in the form of provision of products and services to leading companies.

Target

The pharmaceutical products we develop and sell are rooted in the age-old tradition of phytotherapeutic medicine. Studied scientifically by analysing the compositions of plants and plant extracts and the activity they produce on the human body, this branch of medicine indicates how to obtain the best from nature in order to treat specific physical ailments.

Ginsana products are intended for those who prefer to meet their therapeutic needs using effective self-medication of natural origin with definitely less undesired side effects.

To all this we should add the great value of the proven clinical efficacy of our preparations through studies that are typical of what is known as “evidence-based medicine”.

Growing together.

Social responsibility

The attention paid to those who work here as people with dreams and projects is identical to the attention we devote to the geographical area in which we operate, respecting the environment and promoting its development.

Once again, Ginsana combines nature with science, significantly reducing carbon dioxide emissions. The development of an energy-saving programme has culminated in the creation of one of the largest solar water-heating systems in the Canton of Ticino. Ginsana is recognised as a centre of excellence in professional training for students, providing apprenticeship programmes in the fields of laboratory work and logistics. We work together with and support cultural organisations, training schools and universities in our Canton.

Our history

Our company has taken over the wealth of know-how and resources of Pharmaton, founded in 1942 and acquired by the Boehringer Ingelheim Group in 1991.

Thanks to the development and use of a standardised Ginseng extract (identified and protected with the trademark G115), in 1975 the company launched its line of Ginsana products; thereafter it launched Gincosan, followed by Prostatonin, Songha Night, Seresis and Pronatal.

With effect from 1st January 2009, Ginsana took up the legacy of Pharmaton. Still as a part of the Boehringer Ingelheim Group, Ginsana SA has full operational autonomy and its own mission: to research, develop and offer the best natural pharmaceutical products, the best industrial services and the best scientific services.

We have been promoting the natural wellbeing of man for seventy years.

Our products

Our products are based on natural ingredients that have been scientifically tested. Before being approved, each product has to meet the precise requirements defined by the Health Authorities in terms of quality and efficacy.

Each product developed by Ginsana is tailor-made to meet specific consumer needs, defined by four categories: preparing, protecting, giving vitality and restoring balance.

Ginsana products are sold mainly by chemists as over-the-counter medicines, providing them not only with a distinctive brand but also a range of products backed by solid scientific documentation that fully satisfies their customers' requirements.

Team

Because
balance
starts from
the roots.

A pharmaceutical product of natural origin must offer something extra to patients seeking a valid alternative to synthetic pharmaceutical products. The staff at Ginsana are aware of this and do their utmost, every single day, to give the company the authoritative image that sets it apart from the rest of the competitors.

Each and every one of them becomes part of a group, contributing their energy and their highly skilled scientific and industrial knowledge to a work environment that stimulates innovation and development.

13 different nationalities and a large proportion of highly competent personnel form the foundations of a company that invests in talent through targeted continuous training. A calm work environment combined with professional skill and passion promote an atmosphere in which the central nature of the individual is mirrored in a strong feeling of belonging.

The satisfaction and wellbeing of people who choose our products thus stems from the satisfaction and wellbeing of the people who work with us.
